1. Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the closest prior art of record, Matsuyama et al. (US 6,886,028), fails to anticipate or render obvious limitations from independent claim 1 such as "a settings image data editing portion receiving, from the network via the communicating portion, an edit instruction that is inputted in association with the edit image and that indicates at least one setting item identified by the user, and editing the settings image data, based on the edit instruction, to include only the at least one setting item identified by the user in the settings image and to exclude at least one setting item not identified by the user from the settings image, the settings image data editing portion updating the settings image data stored in the storage portion with the edited settings image data; and a settings image data providing portion controlling the communicating portion to provide the network with the settings image data edited by the settings image data editing portion, the edited settings image data indicating an edited settings image that lists only the at least one setting item identified by the user among the plurality of setting items, the at least one setting item listed in the edited settings image being used for performing settings related to the corresponding at least one function possessed by the image forming portion, the edited settings image enabling the user to perform settings related to the at least one function corresponding to the at least one setting item identified by the user".

Regarding claims 2-6, 13, claims 2-6, 13 are allowable due to dependence from the respective base claim 1.

Regarding claim 7, the closest prior art of record, Matsuyama et al. (US 6,886,028), fails to anticipate or render obvious limitations from independent claim 7 such as "a settings image data editing portion receiving, from the personal computer via the network and the communicating portion, an edit instruction that the user inputs in the instruction inputting portion in association with the edit image and that indicates at least one setting item identified by the user, and editing the settings image data, based on the edit instruction, to include only the at least one setting item identified by the user in the settings image and to exclude at least one setting item not identified by the user from the settings image, the settings image data editing portion updating the settings image data stored in the storage portion with the edited settings image data; and a settings image data providing portion controlling the communicating portion to provide the network with the settings image data edited by the settings image data editing portion, the edited settings image data indicating an edited settings image that lists only the at least one setting item identified by the user among the plurality of setting items, the at least one setting item listed in the edited settings image being used for performing settings related to the corresponding at least one function possessed by the image forming portion, the edited settings image

enabling the user to perform settings related to the at least one function corresponding to the at least one setting item identified by the user".

Regarding claims 8-12, 14, claims 8-12, 14 are allowable due to dependence from the respective base claim 7.
